

## **64 Item Semantic Battery Test Pack**

The 64 item semantic battery test pack is made up of a general instruction sheet and copies of the following tests based on 64 items from the 260 Snodgrass Picture Naming Set:

1. **ACE.** Score sheet = test material. No other test materials required. This test should be given first before all others. Results for Animal fluencies can be copied into the Category fluency test. There are 12 items that the subject is required to name as part of the ACE test. Three of these (helicopter, barrel and kangaroo) are also part of the confrontation naming test, but generally speaking it is easier to repeat these items during the confrontation naming test. There are three versions of the ACE test, differing only in the name and address used for recall testing. To avoid practice effects, version A should be given on the first visit, version B on the next visit and version C on the third visit and so on
2. **Category Fluency:** Score sheet = test material. No other test materials required.
3. **Letter Fluency:** Score sheet = test material. No other test materials required.
4. **Naming:** Score sheet plus one powerpoint file with the 64 pictures arranged 4 pictures to a page. These should be printed out and cut so that each individual picture can be mounted onto a 6 x 4 inch card. The pictures have been arranged so that top left is card 1, top right is card 2, bottom left is card 3 and bottom right is card 4 and so on, so that the pictures print in the order that they appear on the score sheet. For ease of administration it is advisable to number the cards on the rear. Numbering ensures that the cards are presented for naming in the same order as the score sheet (NB These cards are also used in the Picture Sorting Test, see below).

**NB. NAMING test should always be done BEFORE any of the tests 5 to 10.**

5. **Category Comprehension.** Score sheet (with brief instruction) and Powerpoint file of 64 sheets each with 8 pictures. The sheets should be printed from the Powerpoint file and numbered on the reverse in the order that they print. Sheets should be presented in that order so that the subject sees one example from the 'domestic animals' category followed by an example from the 'foreign animals' category and so on. The answers are recorded onto the answer sheet working from the top of the first column down that column before moving to the top of the second column and working down that column etc etc.
6. **Naming to Description:** Score sheet = test material. No other test materials required.

- 7. Generation of Definitions:** Score sheet = test material. No other test materials required, but see also Test Instruction file for detailed instructions on test administration
- 8. Category Sorting: pictures:** Score sheet plus set of 20 KEY CARDS for sorting. The set of NAMING cards described above is used for the SORTING tasks. The sorting task **MUST** be given after the NAMING task, either later in the same testing session, or on another occasion. More detailed instructions are given in the Test Instruction file together with the ANSWERS for the Sorting task.
- 9. Category Sorting: words.** (Instructions are the same as for the Picture Sorting test.) Score sheet plus 64 words which can be printed out onto sticky labels. Each word should be stuck or printed onto a separate blank white card (at least 6 x 4 inches in size). These cards form the basis of the word sort test. Use the KEY CARDS from the Picture Sorting test.
- 10. Camel and Cactus: pictures.** Score sheet plus a set of 64 sheets each with a target picture and four foils all in colour.
