

Repeat & Point Test (Aug. 2006)

Researcher:

Name:

Date of Test:

Test round:

Hospital no:

Date of Birth:

Diagnosis:

Subjects are read a word that they repeat and then point to its picture. Please read the word before each testing condition. For example: *Please repeat the word SKUNK. Please point to the SKUNK.*

For repetition: if the subject initially produces an incorrect phoneme but then self-corrects, this is considered as an incorrect response. For example, HICC... HIPPOPOTAMUS would be scored as incorrect, but HIP...HIPPOPOTAMUS would be scored as correct. Please note all attempts and responses.

For pointing: if the subject points as the incorrect location but then self-corrects immediately, the correct response is taken (if experimenter feels that the incorrect was due to impulsive responding or not looking at all of the images, please advise the subject to take their time before deciding). If the subject is incorrect in word picture matching, please note location number.

**After the practice items feedback is given. No feedback is given for any other items.**

**RECORD RESPONSES BELOW + TAPE VERBATIM RESPONSES**

Torder	Item	living/nonliving	Repeat	Point target	Point score
