# STRUCTURED ONLINE CLINICAL EDUCATION

The University of Sydney School of Medicine is the largest provider of postgraduate vocational coursework for clinicians in Australasia.

Designed and led by highly respected senior clinicians, our online courses will influence your practice by enhancing your understanding of evidence-based medicine and improving your clinical decision-making skills.

Many of our courses and units of study are endorsed by professional bodies, and are eligible for Continuing Professional Development (CPD) points.

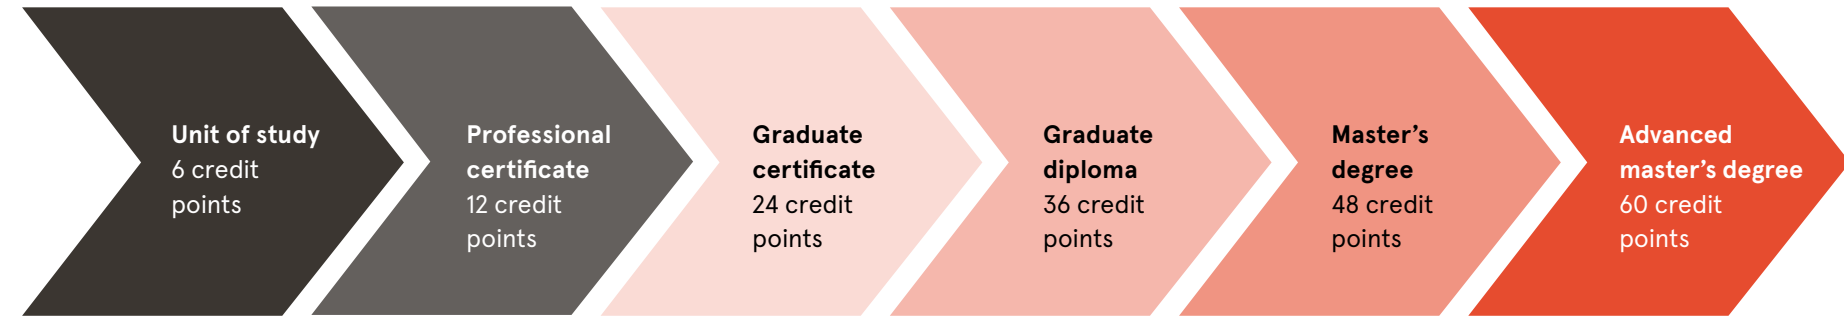

Whether you want to prepare for college exams, gain specialist skills and knowledge in your chosen field or pursue medical research, our courses will help you stand out in a competitive field.

“Studying critical care offers a competitive advantage as it bridges the gap between theory and the practical application of that knowledge on the floor.”

**Dr Khanh Nguyen**

Program Director, Critical Care Medicine  
Staff Specialist in Emergency Medicine,  
Auburn and Canterbury Hospitals, Sydney

### Flexible study options

We offer a range of carefully curated programs to suit your needs. Whatever the stage of your career, there's something on offer for you.

You can choose from individual units of study, a two-unit professional certificate or a postgraduate degree. You can move between any of these

awards, provided you meet the relevant admission criteria.

Most courses are taught online and some include intensive face-to-face, skills-based workshops. We provide you with a safe learning environment and opportunities to interact with expert clinician teachers as well as your peers.

“Our internal medicine program gives students the knowledge and skills to be better doctors.”

**Professor Leo Davies**

Program Director, Internal Medicine  
Senior Staff Specialist in Neurology and  
Head of the Department of Neurophysiology,  
Royal Prince Alfred Hospital

### How will postgraduate study benefit your career?

Our courses will help you to:

- fill knowledge gaps and develop skills that enable lifelong learning
- stay abreast of the latest technologies, treatments and techniques in your chosen specialty
- learn practical skills to improve your patient care
- find answers to your clinical questions
- broaden your non-technical skills in important areas including critical thinking, clinical communication, leadership, research and teaching
- establish a network with senior clinicians and peers
- practise evidence-based medicine
- prepare for college exams.

“With a theoretical foundation and practical experience, our graduates are ahead of the game.”

**Alison Szekely**

Program Co-Director, Clinical Neurophysiology  
Senior Neurophysiology Scientist, NSW Health HSLHD
