

Project Title: What is the relationship between research and teaching in Universities? A systematic review and meta-analysis		Code: SPH15
Host School / Institute: Sydney School of Public Health/Brain and Mind Centre	Address: Brain and Mind Centre, Mallet Street, Camperdown	
Certificates & Clearances required: No		
Primary Supervisor: Prof Clement Loy		
Phone: 0411 641 912	Email: clement.loy@sydney.edu.au	
Co-Supervisor/team: N/A		
Project Type: Data Analysis; Literature Review		
Project Category: Education		
Skills / Attributes of a successful student: A basic understanding of statistics.		
Project Keywords: Meta-analysis; Higher education		
<p>Project Description: Currently, there is substantial variation in opinion, as to whether research in Universities enhances teaching outcomes. The much-quoted meta-analysis was from twenty years ago and the relevant academic literature has expanded since. This project aims to systemically collect, appraise, and statistically summarise the literature, in order to inform higher education policy decision making.</p> <p>The summer scholar, through this project, will acquire skills in systematic review and meta-analysis, which will be applicable to almost any discipline in her/his future career. The project is expected to result in a conference presentation or publication, and is likely to play an important role in current higher education debate.</p>
