

The Research Strategy Pillars 2025–2032

The Sydney School of Veterinary Science

Pillar 1:

Delivering impactful research

We will:

Engage with the veterinary community:

Conducting meaningful projects that showcase talent and passion for sustainable research addressing real-world questions.

Make interdisciplinary and cross-species research sustainable

Leveraging decades-long track record in interdisciplinary research to ensure applied outcomes through high-quality clinical, community and industry-linked collaborations.

Prioritise One Health approach

Supporting healthy and thriving communities by building impactful research and education partnerships to advance animal health and welfare, biosecurity, and zoonotic disease prevention.

Pillar 2:

Prioritising innovative and collaborative research communities

We will:

Expand multidisciplinary collaboration with stakeholders

Prioritising a community of innovative, diverse, and approachable researchers, educators, and mentors focusing on research that future-proofs veterinary science.

Create research active veterinary hospitals

Utilising veterinary hospitals as the interface of the research collective to investigate existing and emerging challenges in animal health and welfare of community importance while training future veterinary leaders.

Invest into ethical and translational research

Delivering ethical research leveraging broad animal health and production expertise, with industry engagement and community networks.

Pillar 3:

Investing in research education and capacity building

We will:

Expand integration of education and research

Incorporating education and research through collegiality and evidence-based practice to build capacity in new veterinary leaders.

Invest in future leaders development

Solving existing and emerging health and welfare problems, and generating leaders of the veterinary profession.
