

Sustainability and Health Example Study Plan

Health is a critical aspect of genuine sustainability and is relevant to a number of other aspects of sustainability, including food security and diet, policy, population and financial stability of individuals and political states. Healthcare is a common indicator of a healthy society and is important globally in both developed and developing nations. This study plan adds an understanding of the different aspects of health, including possible electives from nursing, dentistry, medicine and ethics to a foundation of understanding about sustainability.

If your career aspirations are to add a dimension of sustainability to your existing healthcare expertise, to work in sustainability in the health sector, or to consult to organisations engaged in healthcare, this study plan is relevant to you.

An example Sustainability and Health study plan might look like:

Qualification	Unit type	Unit code	Unit name	Credit points	Semester	
Master	Graduate Certificate	Core	SUST5001	Introduction to Sustainability	6	1, 2
